

EARNINGS RELEASE 2Q17

São Paulo, August 9, 2017 – RUMO S.A. (B3: RAIL3) (“Rumo”) and COSAN LOGÍSTICA S.A. (B3: RLOG3) (“Cosan Logística”) today announce its results for the second quarter of 2017 (2Q17). The results are consolidated in accordance with the accounting criteria adopted in Brazil and the International Financial Reporting Standards (IFRS). The comparisons included in this report consider 2Q17 and 2Q16 Pro forma, unless if otherwise indicated.

Rumo Highlights in 2Q17 and 6M17

- EBITDA reached R\$732.7 million in 2Q17, up 24% from 2Q16. In 6M17, EBITDA came to R\$1.2 billion, up 18% from 6M16. Such result reflects growth of transported volumes, as well as cost and expenses reduction efforts.
- Total volume transported reached 12.3 billion RTK, up 14% from 2Q16. The capacity increase, due to investments performed, reflected in growth of volumes transported by Rumo, with higher representativeness of more profitable cargos originated in the state of Mato Grosso. In 6M17, transported volume reached 22.3 billion RTK, up 7% year-on-year.
- A total of 3.3 million tons were loaded at Rumo’s terminals at the Port of Santos (SP) in 2Q17. The 6% decrease year-on-year reflects a slower start of sugar shipment. In 6M17, 5.8 million tons were loaded, down 9% from 6M16.
- CAPEX totaled R\$478.2 million in 2Q17, and R\$950.1 million in 6M17, in line with Rumo’s Capex plan. Main investments referred to improvements in rail yards, terminals and rail lines, besides acquisition of rolling stock.

1. Executive Summary of 2Q17 e 6M17

Rumo's EBITDA reached R\$732.7 million in 2Q17, up 23.5% year-on-year. In 6M17, EBITDA totaled R\$1.2 billion, up 18.1% year-on-year. This increase was mainly related to higher volume transported by Rumo in the quarter, due to higher capacity generated with the execution of the company's Capex plan, combined with record soybean and corn crops. In addition, Rumo recorded greater cost efficiency. Variable costs increase came lower than growth of volume transported, and fixed costs and expenses, excluding depreciation and amortization decreased. Thus, Rumo's EBITDA margin climbed from 43% in 2Q16 to 49% in 2Q17.

Volume transported reached 12.3 billion RTK in 2Q17, up 13.7% year-on-year. In 6M17, volume transported was up 6.8% to 22.3 billion RTK from 6M16. Historically, the second quarter is dedicated to soybean transportation. In 2017, a worse trading scenario of such commodity was seen due to gradual price drop in the international market, according to prices of the soybean sack in Mato Grosso, as shown in the graph below. Thus, in the North Operation, the company's main corridor, the demand for soybean transportation only occurred until May, when producers decided to store the product, waiting for better pricing conditions. Within this scenario, the trading companies anticipated the shipment of the second corn crop for June. Traditionally, corn exports only initiate in the third quarter. Such move increased the complexity of operations and required additional efforts of inland and port terminals until the conclusion of entire exchange of the transported product.

Rumo managed to adapt its operation, executing the exchange from soybean to corn in order to maximize the volumes transported of both products. Accordingly, Rumo gained market share on grain transportation to the Port of Santos (SP) by 7 p.p., from 40% in 2Q16 to 47% in 2Q17. As seen in the graph below, this market share gain occurred even in a scenario of 11% increase in total shipment of grains to the port in the quarter, demonstrating Rumo's higher capacity due to execution of its Capex plan, as well as the consolidation of its business strategy.

Net loss in 2Q17 was R\$30.2 million and leverage as measured by broad net debt/EBITDA LTM reached 4.3 times. Despite EBITDA growth, higher financial expenses, due to higher debt costs as a result of debt reschedule process, and an increase in depreciation and amortization resulted in net loss in the quarter. Leverage at the end of 2Q17 was lower compared to 1Q17.

Rumo reiterates its Guidance released for 2017. Outlook for the second half is positive, with expectation of grains exports increase during the period. The improvement of corn harvest indicates record volumes for this commodity crop this year. In addition, with improved soybean trading conditions as of July, there are expectations that grain stored by producers is going to be shipped at the year's end, with the conclusion of corn exports and the opening of space at port terminals.

Total volume transported in the North Operation was 8.3 billion RTK in 2Q17, up 16.6% from 2Q16. In 6M17, total volume transported was 15.4 billion RTK, up 8.8% from 6M16. Total volume increase in the quarter is mainly due to higher grain transportation, combined with a marginal increase in industrial products transportation.

The transportation of agricultural products came to 7.7 billion RTK in 2Q17, up 17.9% from 2Q16. The volume transported was 14.2 billion RTK in 6M17, up 8.7% year-on-year. The months of April and May were focused on soybean transportation. As of June, with grain stored by producers waiting better pricing conditions, the trading companies started to ship corn from the second crop, in order to accomplish the transport contracts volumes. Despite such scenario, Rumo's higher capacity contributed to 9.7% growth of soybean volumes in the quarter, which combined with the anticipation of corn transportation in the period, resulted in 22.4% growth of grain transportation in the state of Mato Grosso. Sugar transportation decreased in 2Q17 mainly due to priority given to grain demand, besides 2Q16 strong comparison basis, when the anticipated end of soybean exports led Rumo to direct its capacity to sugar.

Transportation of industrial products came to 574 million RTK in 2Q17, 1.3% higher than 2Q16. In 6M17, it came to 1.2 billion RTK, up 9.6% year-on-year. This quarterly result is due to higher fuel transportation. Record soybean and corn crops stimulated higher consumption of fuel, especially by agricultural machinery in the producing regions of Mato Grosso, thus, generating higher demand for fuel transportation from refinery in São Paulo to the Mid-West region.

Port loading volume was 3.3 million tons in 2Q17, down 6.3% from 2Q16. In 6M17 port loading volume reached 5.8 million tons, down 9.0% year-on-year. Sugar crop exports, which initiates in the second quarter of the year, started slower compared to previous year, accelerating only at the end of period, resulting in volume drop.

Note⁴: Includes revenue from the right of way of other railways, revenue from sugar transportation using other railways or road transportation and revenue from volumes contracted but not executed according to commercial agreements (take or pay).

Net revenue from North Operation totaled R\$1.1 billion in 2Q17, up 11.8% from 2Q16. In 6M17, net revenue came to R\$2.0 billion, up 7.2% year-on-year. Such increase is mainly due to higher volumes of agricultural products transported. Industrial product volume increase and higher average tariffs of transportation and port loading also contributed to such result. These positive effects were partially impacted by decreased volume loaded. The reduction in other revenues is due to 2Q16 basis of comparison which included amounts recognized as take or pay.

The cost of services provided totaled R\$604.0 million in 2Q17, up 15.0% from 2Q16. In 6M17, the cost of services provided came to R\$1.2 billion, 11.7% higher than 6M16. Variable costs increased 7.5% to R\$239.3 million, mainly reflecting volume transported increase (+16.6%). Even so, higher efficiency of new locomotives acquired, resulting in lower fuel consumption (liters/GTK: -7.4%), contributed to increase variable costs below volume growth in the period. Fixed costs totaled R\$173.0 million in 2Q17, up 7.5% from 2Q16, mainly due to higher personnel expenses, due to provision for the variable remuneration program.

EBITDA reached R\$644.1 million in 2Q17, up 16.8% from 2Q16. In 6M17, EBITDA came to R\$1.1 billion, up 11.9% from 6M16. Investments made by Rumo over the past year increased transportation capacity and increased efficiency, thus resulting in higher margins and EBITDA growth.

The South Operation transported a total volume of 3.5 billion RTK in 2Q17, up 9.4% from 2Q16. In 6M16, total volume was up 4.8% to 6.1 billion RTK. This result is mainly due to higher volumes of agricultural products (soybean and sugar) combined with a significant growth of industrial products.

The volume of agricultural products was up 10.6% to 2.6 billion RTK. In 6M17, volume was up 3.9% to 4.4 billion RTK, compared to 6M16. As seen in Mato Grosso state, soybean producers of the South region and the state of Mato Grosso do Sul stored part of the products in the quarter, especially in April and May, awaiting better pricing in the international market. Despite such scenario, Rumo's higher capacity generated by investments in assets renewal, combined with a better soybean crop in 2017, enabled the company to increase its share in the transportation to the ports of Paranaguá (PR) and São Francisco do Sul (SC), resulting in a significant volume growth in the period. In addition, a continued consolidation of business strategy in long-term agreements enabled to increase sugar volumes, the South Operation's most profitable cargo.

Transportation of industrial products increased 6.1% to 941 million RTK compared to 2Q16. In 6M17, volume came to 1.8 billion RTK, up 7.2% year-on-year. Pulp volume grew 35.9% in 2Q17, due to supply made to Klabin's new plant in Ortigueira, Paraná, in May 2016. In addition, iron ore volume grew 68.0%, mainly due to better trading conditions. Civil construction volumes were up 6.8%, due to the company's operating improvements in transporting such cargo. These effects were partially offset by 9.8% drop in fuel volume due to the change in Petrobras' pricing policy which privileged marketplaces outside Rumo's influence area.

Note⁵: Includes revenue from volumes contracted and not executed according to commercial agreements (take or pay).

Net revenue from the South Operation amounted to R\$333.0 million in 2Q17, up 10.1% from 2Q16. In 6M17, net revenue came to R\$570.1 million, up 8.1% year-on-year. This increase in the quarter was mainly due to higher volumes transported. Increase in the average yield practiced in the quarter also contributed to such result.

In 2Q17, cost of services provided increased 5.3% to R\$310.5 million. In 6M17, the cost of services provided came to 617.4 million, up 7.3% year-on-year. Variable costs went down 0.7% to 74.7 million due to higher efficiency in fuel consumption of new locomotives (liters/GTK: -6.1%). Fixed costs totaled R\$144.7 million, down 9.8% year-on-year, mainly due to lower costs with consulting services and efficiencies captured. The 54.0% increase in depreciation and amortization is due to capitalization of investments.

EBITDA from the South Operation was R\$94.8 million in 2Q17, compared to R\$46.7 million in 2Q16, and R\$97.6 million in 6M17 versus R\$34.0 million in same period last year. EBITDA year-on-year growth is mainly due to higher volumes transported, combined with cost efficiency gains, which resulted in higher margins.

Volume of containers transported decreased 8.9% in 2Q17 to 15.4 thousand containers. In 6M17, total volume came to 29.0 thousand containers, down 11.3% year-on-year. The volume drop reflected the rationalization of non-profitable routes, especially in the Rio Grande do Sul and Mercosur corridors. In addition, demand for refrigerated products transportation dropped in the period.

In the quarter, net revenue fell by 24.9% to R\$56.8 million. In 6M17, net revenue went down 25.6% to R\$104.7 million compared to 6M16. In 2Q17, the lower volume of containers handled (-8.9%) and lower average yield (-12.9%) practiced in the period, due to the mix of transported products, contributed to such quarterly result.

The cost of services provided totaled R\$74.8 million in 2Q17, down 14.4% in the period. In 6M17, the cost of services provided came to R\$146.3 million, down 12.7% year-on-year. The reduced number of containers transported in the quarter, contributed to decreased variable costs, totaling R\$23.1 million. In addition, fixed costs went down 26.2% to R\$35.8 million.

EBITDA from the Container Operation was a loss of R\$6.2 million in 2Q17, and a loss of R\$16.8 million in 6M17. Decreased volume transported and lower average yield practiced impacted quarterly results.

Note⁷: Own logistics costs include sand, right of way, terminals and other variable costs

Note⁸: Third-party freight costs include contracts for road and railway freights with other operators

Variable costs totaled R\$337.1 million in 2Q17, up 3.8% from 2Q16. In the first half of 2017, variable costs came to R\$615.4 million, down 3.0% from 6M16. Despite the relevant growth of volume transported, operational efficiency gains were the main drivers of marginal increase in the fuel cost in the quarter. Higher grain volumes handled in the North Operation, contributed to increase own logistics costs. In addition, lower demand for sugar transportation compared to 2Q16 resulted in decreased transportation expenses by other railway and truck freights.

Fixed costs totaled R\$652.3 million in 2Q17, up 11.9% from 2Q16. In 6M17, fixed costs totaled R\$1.3 billion, up 14.0% from 6M16. Maintenance costs reduction was partially due to the reclassification of few accounts which in 2017 are now accounted as personnel costs. In addition, higher personnel costs were due to provision for the variable remuneration program. Other operational costs also went down 60.1%, reflecting the recovery of tax credits. Depreciation and amortization climbed 40.3%, due to the capitalization of investments made last year. Excluding depreciation and amortization, fixed costs went down 4.4%.

Note⁹: It includes interest rates, foreign exchange variation, monetary variation, net result from derivatives and other debt charges.

The financial result in 2Q17 was a net expense of R\$433.0 million, up 6.5% from 2Q16. In 6M16, the financial result was a net expense of R\$884.4 million, up 5.6% from 6M16. In 2Q17, bank debt cost was up 28.5% to R\$324.0 million, mainly due to increase in the average balance and effective debt cost in the period, due to the reschedule process concluded in 2Q16 and internalization of Senior Notes 2024 proceeds, partially offset by the decline in CDI between quarters. Charges over leasing and real estate receivables certificates recorded a significant drop due to the amortizations occurred in these instruments, without new funding. Such increase in the broad gross debt cost was partially offset by financial investments yields. Monetary variation on lease and concession agreements reflects the adjustment (SELIC) of the unpaid concession amounts of West and Paulista Networks, which are currently under litigation. Other financial expenses include costs with bank-issued guarantees, which increased due to the contract and renewal of letters of credit at a higher cost.

4. Loans and financing

Total gross debt at the end of 2Q17 was R\$12.0 billion, down 2.2% from 1Q17. Leverage decreased to 4.3x (broad net debt/EBITDA), considering EBITDA of R\$2.2 billion in the last 12 months. The 3.7% increase in the balance of broad net debt is mainly due to the execution of the Capex plan, which consumed part of the cash position in the period. All the foreign currency denominated debt of Rumo are hedged for exchange variations.

Note ¹²: In 1Q17 includes restricted cash linked to bank debts of R\$88.1 million. The 2Q17 includes restricted cash from bank debts totaling R\$90.6 million.

Rumo is subject to certain restrictive covenants referring to the leverage level and debt service coverage, in a some of its contracts. Most restrictive provisions are verified at the year's end and refer to broad net debt. Broad net debt includes bank debts, debentures, leases, real estate receivables certificates and derivatives linked to credit operations, less marketable securities and cash and cash equivalents. For December 31, 2017, the covenants were defined for a maximum leverage of 4.3 times (broad net debt / EBITDA LTM) and minimum interest rate coverage index of 1.4 times EBITDA/Financial Result.

In 2Q17, Capex totaled R\$478.2 million, down 20.2% from 2Q16. In 6M17, Capex came to R\$950.1 million, down 5.5% year-on-year. In the quarter, recurring Capex totaled R\$192.5 million, down 2.3% year-on-year, in line with the Capex plan. Expansion Capex totaled R\$285.6 million, down 29.0% from 2Q16, mainly due to higher investments in rolling stock in 2016. In 2Q17, main investments in capacity expansion were: (i) acquisition of 11 GE ES-43 locomotives and 111 HPT railcars; (ii) revamp of permanent way, by replacing tracks and sleepers and improving infrastructure, in order to remove restrictions and increase capacity; (iii) revamp of railway at the right margin of the Port of Santos (SP), enabling a better railway reception at the port; (iv) works for fertilizers discharge grid at Rondonópolis Terminal (MT); and (v) improvements in rail yards and terminals, aiming optimizing the train dwell time and increasing operation's productivity.

Cycle time of railcars (days)	7.4	7.7	7.8	7.6	7.0	7.0	7.4	-5.4%

Note¹⁴: Considers only the variable costs of rail operations, excluding costs with third party freight.

Note¹⁵: The Operating Ratio calculation considers proportional allocation of part of the 4Q16 depreciation in previous quarters of the same year

Unitary Rail Variable Cost: The 2% decrease reflects the Company's higher efficiency assets, especially new locomotives' lower fuel consumption.

Unitary Fixed Cost + SG&A: The 14% drop is a result of fixed costs reductions achieved in 2016, partially offset by inflation in the period.

Operating Ratio: The ratio, which represents the portion of operating costs and expenses as a percentage of net revenue, improved year-on-year mainly due to Rumo's operational efficiency gains, besides Rumo's cost-saving efforts.

Diesel consumption: The 8% improvement in this index is a result of lower unitary diesel consumption of locomotives included in the operation, as well as higher grains transportation in the North Operation, since the route of these commodities has lower average diesel consumption (liters/GTK), when compared to sugar routes deriving from the State of São Paulo.

Transit time: The index was affected by interruptions in the rail line, mainly due to scheduled works in stretches of North and South operations, in line with Capex plan.

Cycle time of railcars: Increased transit time of operations was offset by improved Rumo's operation at the terminals, reducing railcars loading and unloading time, thus, resulting in improved cycle of assets. The result in the North Operation was achieved even with the anticipated shipment of corn second crop. The change in the type of products operated by terminals tends to momentarily jeopardize the operation by increasing the cycle of assets.

Rail cars loaded/day: The ratio presented a lower result than the volume growth, reflecting higher volumes of grains originated in the state of Mato Grosso, resulting in greater transportation average distance, as well as fleet renewal in operations, where railcars with lower capacity were replaced with railcars with capacity of 90 tons, thus, allowing the same volume to be transported with fewer loaded railcars.
